

HAPPY WORLD SIGHT DAY

Did you know that children who are not performing at the expected level might have a learning-related visual problem?

Symptoms of learning-related vision problems can include:

- Headaches or eye strain
- Blurred vision or double vision
- Dislike or avoidance of reading and close work
 - Short attention span during visual tasks
 - Excessive blinking or rubbing of the eyes

Remember, early intervention of a visual problem can make a huge difference in the success rate, learning ability and comfort of your child.
