

stingray VS manta ray

Stingrays breathe through their gills. They have spiracles (holes) that open when they are not swimming to allow water to pass over the gills so they can breathe.

Stingrays have a much smaller pectoral width.

Stingrays grow to be 1-2 meters.

Has a spine for protection.

Manta rays breathe through their gills. Water passes in through their mouth over their gills and out through the gill slits.

Manta rays have a wider pectoral width.

Manta rays can grow up to 9 meters.

Has no spine for protection.
